# ASSIGNMENT-14.4

Ht.no:2303A51282

Batch:05

**Task 1:** Responsive Homepage Layout for a Startup Website
Scenario
You are designing a basic homepage for a startup company that needs
to look good on desktops, tablets, and mobile devices.
Task Description
• Create a web page structure using HTML that includes:
o A header with navigation links
o A main content section
o A footer with basic information
• Use AI assistance to generate responsive CSS using media
queries.

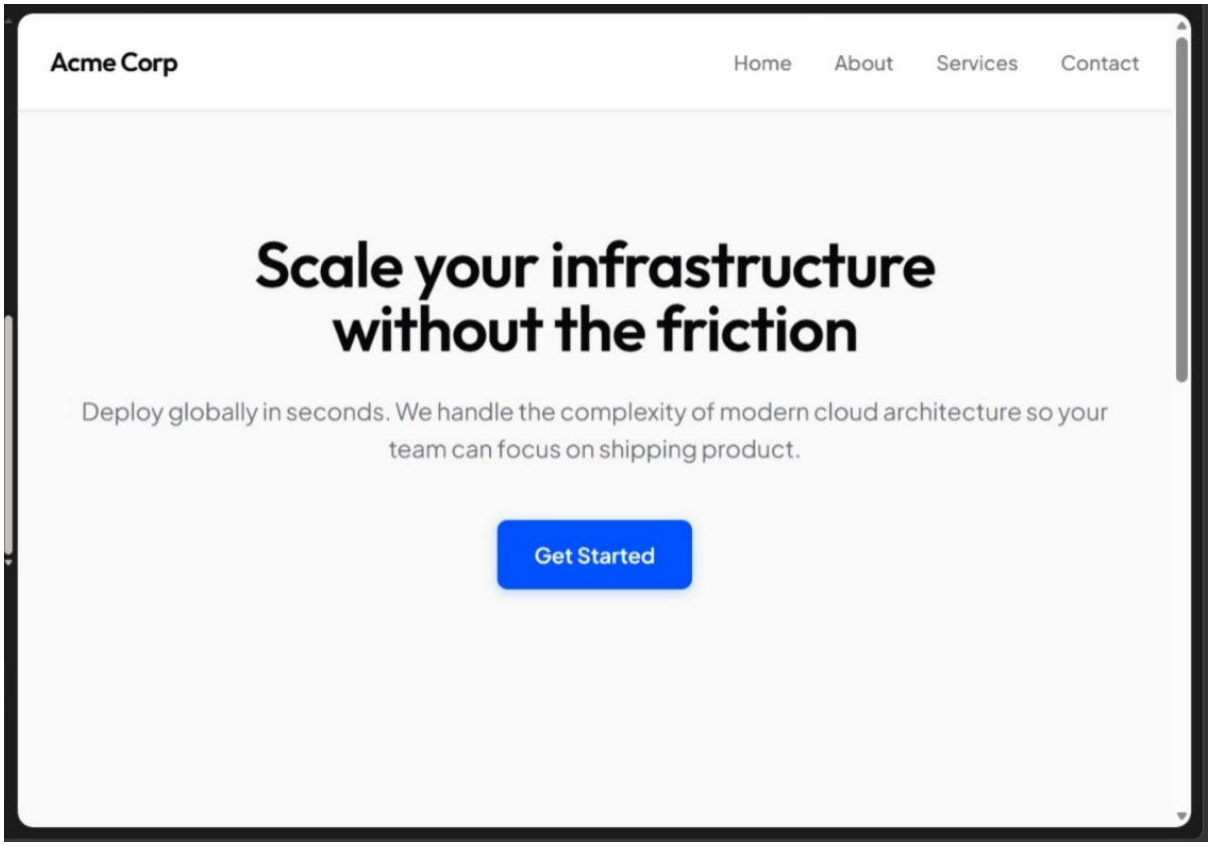
• Ensure the layout adjusts smoothly across different screen sizes.

**Prompt:**

Create a simple responsive homepage for a startup website using HTML and CSS. The page should include a header with navigation links, a main content section with a heading and short description, and a footer with basic information. Use CSS media queries so the layout adjusts properly for mobile, tablet, and desktop screens. The code should be clean and easy to understand.

Create a simple responsive homepage for a startup website using HTML and CSS. The page should include a header with navigation links, a main content section with a heading and short description, and a footer with basic information. Use CSS media queries so the layout adjusts properly for mobile, tablet, and desktop screens. The code should be clean and easy to understand.

Output:



**Task 2:** Interactive Call-to-Action Button
Scenario
A marketing page requires a call-to-action button that responds when
users interact with it.
Task Description
• Add a button to a web page using HTML.
• Use AI to generate JavaScript that responds to the button click
by:
Displaying a message or alert
• Ask AI to add meaningful comments explaining the JavaScript
logic.

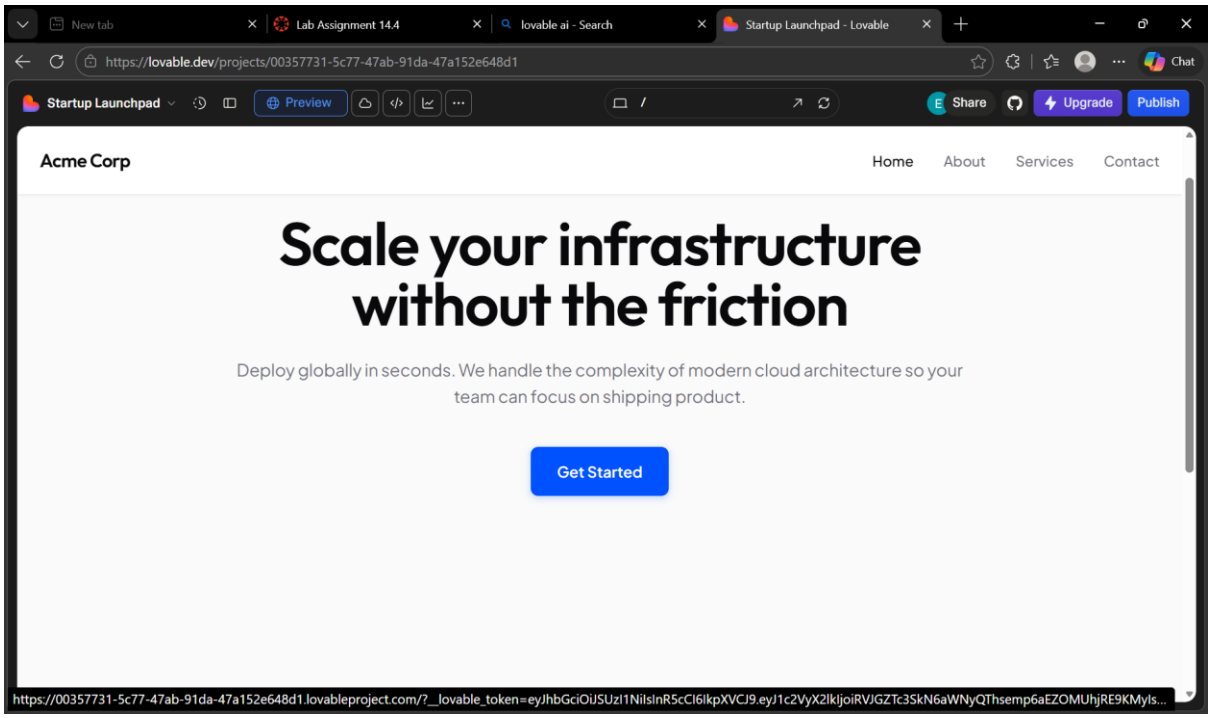
**Prompt:**

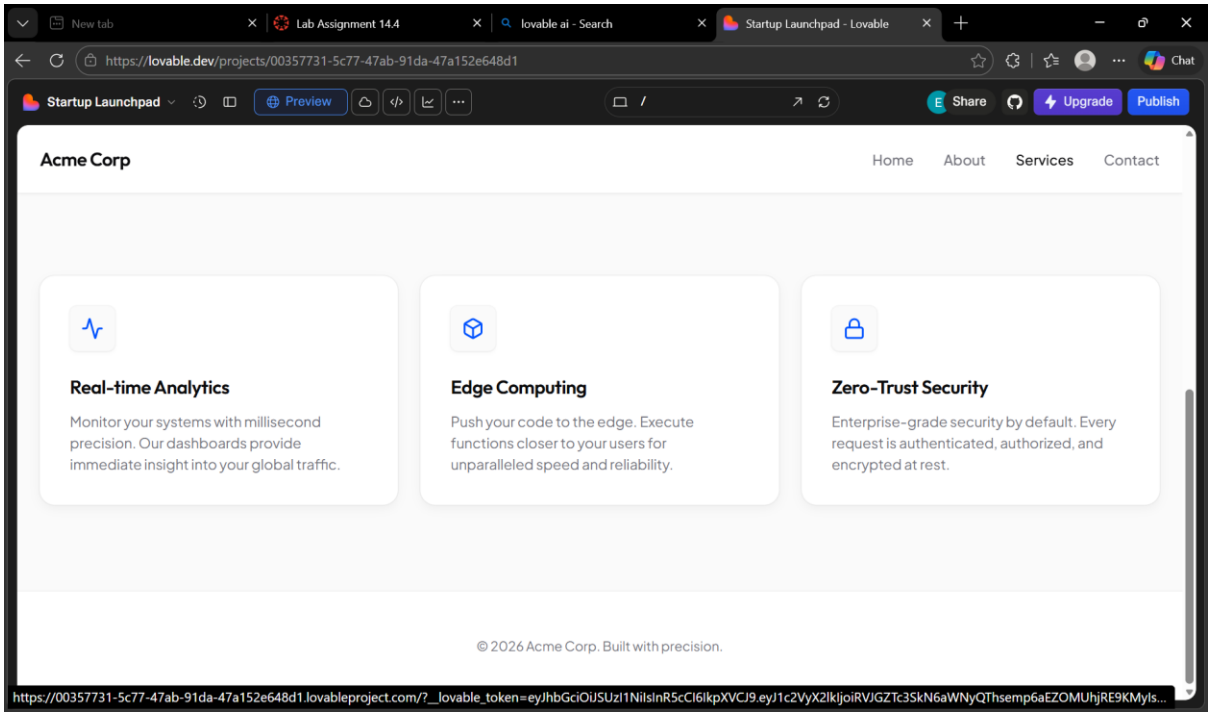
Create a simple web page using HTML, CSS, and JavaScript that includes a call-to-action button. When the user clicks the button, it should display a message or alert without reloading the page. Use JavaScript to handle the button click and add clear comments explaining the JavaScript code. The code

should be simple, readable, and well structured.

Create a simple web page using **HTML, CSS, and JavaScript** that includes a **call-to-action button.** When the user clicks the button, it should **display a message or alert without reloading the page.** Use JavaScript to handle the button click and add **clear comments explaining the JavaScript code.** The code should be **simple, readable, and well structured.**

Output:





**Task 3:** Contact Form with Client-Side Validation

Scenario

You are developing a contact form for a company website to collect user queries safely and correctly.

Task Description

- Design a form with fields for:
  - o Name
  - o Email
  - o Message
- Use AI to generate JavaScript validation logic that:

o Prevents empty submissions
o Checks for a valid email format

**Prompt:**

Extend the existing responsive startup homepage (Task 1) that already has a Call-to-Action button with JavaScript interaction (Task 2).

Now add a Contact section with a contact form that includes:

Name

Email

Message

Use JavaScript for client-side validation to:

Prevent form submission if fields are empty

Check that the email format is valid

Display a message if the form is invalid and prevent page reload.

Add clear comments in the JavaScript explaining the validation logic.

Extend the existing responsive startup homepage (Task 1) that already has a Call-to-Action button with JavaScript interaction (Task 2). Now add a Contact section with a contact form that includes:

Name Email Message Use JavaScript for client-side validation to: Prevent form submission if fields are empty Check that the email format is valid Display a message if the form is invalid and prevent pag ...

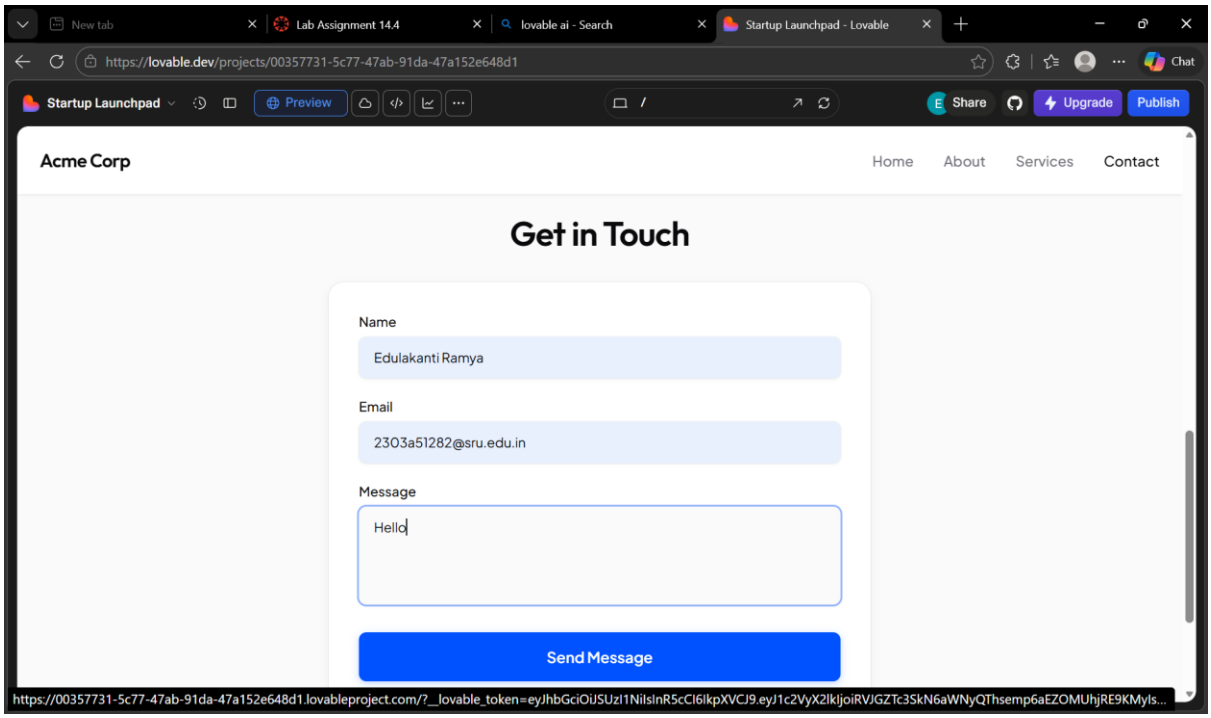
# Output:



**Task 4:** Dynamic List Management for a Product Page

Scenario

A product listing page needs to add or remove items dynamically
without refreshing the page.

Task Description

• Create a simple HTML list to display items.
• Use AI to generate JavaScript that:
o Adds a new item when an “Add” button is clicked
o Removes the last item when a “Remove” button is clicked
• Ensure the DOM updates dynamically.

**Prompt:**

Extend the existing responsive startup website (Tasks 1, 2, and 3).

Add a Product List section that displays items in an HTML list.

Create two buttons:

"Add Item"

"Remove Item"

Use JavaScript so that:

Clicking "Add Item" adds a new item to the list

Clicking "Remove Item" removes the last item

The list should update dynamically using DOM manipulation without reloading the page.

Include clear comments in the JavaScript explaining the logic.

**Task 5:** Modal Popup for User Notifications

Scenario

You are building a user notification popup for announcements or alerts on a website.

Task Description

- Use AI to help generate:
  - o HTML structure for a modal popup
  - o CSS styling with a semi-transparent background overlay
  - o JavaScript to open and close the modal
- Include multiple ways to close the modal (button or overlay

click).
Expected Output
• A web page where:
o Clicking “Open Modal” displays the popup
o Popup overlays the page content clearly
o Modal closes smoothly when instructed

**Prompt:**

Extend the existing responsive startup website created in Tasks 1–4.

Add a user notification modal popup.

Requirements:

Create an "Open Modal" button on the page.

When clicked, a modal popup should appear in the center with a semi-transparent background overlay.

The modal should include a message and a "Close" button.

Use CSS to style the modal and overlay clearly.

Use JavaScript to:

Open the modal when the button is clicked

Close the modal when the close button or overlay background is clicked

The modal should appear smoothly and close without reloading the page.

Include clear comments in the JavaScript explaining the logic.
